

PRESS RELEASE

ASCO Inc. reflects on a thriving Aluminum USA

On October 25th and 26th, ASCO Carbon Dioxide Inc. exhibited at the Aluminum USA in Nashville, Tennessee. The ASCO dry ice blasting machines impressed the many tradeshow visitors with their several advantages of cleaning.

The focus of the show was on all the aspects of aluminum production and processing. ASCO Inc. presented their wide portfolio of ASCO dry ice blasting machines at their booth. The advantages and application fields of dry ice blasting technology are numerous. It is an efficient, yet gentle cleaning method for molds and all kinds of surfaces. Visitors took a close look at the dry ice blasting unit ASCOJET 1708 Combi blaster. The powerful machine is the first ASCO dry ice blasting unit which allows the use of an additional blasting material in the dry ice stream and therefore offers the best combination of gentle cleaning with dry ice pellets and the additional abrasive effect of a carefully selected additive.

Zane Butler, ASCO Inc. General Manager, confirms: "Aluminum USA was a successful event with the opportunity to generate promising contacts. Furthermore, we were able to exhibit our dry ice blasting technology to a live audience. ASCO dry ice blasting is more than a cleaning method, but a complete, individual solution package. It aims to increase quality and flexibility, as part of the daily work process."

Butler adds: "In the days of the exhibition, we were able to present solutions to many customers and prospects with individual consultation. We would like to say thank you for the many interesting discussions and exchange of experiences."
