

SOL Kohlensäure GmbH & Co. KG: New branding for dry ice containers

The German gas company SOL Kohlensäure GmbH & Co. KG has carried out various tests with the ASCO AT440 dry ice containers and is convinced of the containers' excellent insulation values. SOL Kohlensäure GmbH & Co. KG has ordered 48 dry ice containers AT440 for the entire group of companies. These dry ice containers are individually branded with the SOL logo and are therefore not only excellent dry ice containers for storage and transport purposes but also an advertising media.

Felix Probst of the company SOL Kohlensäure GmbH & Co. KG explains: "After extensive sublimation tests and subsequent evaluation of transport dimensions, empty weights, material and sublimation rates, we opted for the ASCO AT440 dry ice box. The combination of the decisive criteria for us, in connection with filling weight and transport dimensions, had a significant influence on the decision. In addition, the containers are branded with our own company logo to ensure that they are unmistakable. Due to the very good insulation, we can supply our customers with high-quality dry ice. In the end, this provides a great added value for our customers and saves dry ice".

The AT440 offers excellent temperature control and long shelf life due to its specially developed foam urethane insulation. The innovative design of the gaskets prevents the cold from escaping, providing the best possible insulation for the containers and a significantly lower sublimation rate. The containers can also be safely stacked thanks to the special shape of the feet and lids.
